Course Description

Course Description: This course focuses on the principles and concepts of interior design, and the use of Building Information Modeling (BIM), used in the field of architecture and interior design. An emphasis is placed on the use of 3D CAD tools in the design and execution of floor plans, wall sections, furniture grouping and design, and elevation drawings. An understanding of 3D CAD concepts and terms, and the use of 3D CAD software such as REVIT, are essential to this course, and the required method of producing finished drawings. English language arts, mathematics, and science are reinforced. Work-based learning strategies appropriate for this course include apprenticeship, cooperative education, internship, and job shadowing. Family, Community and Career Leaders of America (FCCLA) competitive events, community service, and leadership activities provide the opportunity to apply essential standards and workplace readiness skills through authentic experiences.
